

Acceptance Testing

UAT Execution & Report Submission

Date	03 October 2026
Team ID	PNT2022TMIDxxxxxx
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	4 Marks

1. Purpose of Document

The purpose of this document is to briefly explain the test coverage and implementation outcome of the Standard Laptop procurement project at the time of User Acceptance Testing (UAT). The project uses ServiceNow Flow Designer to automate creation and assignment of a catalog task for standard laptop configuration.

2. Defect Analysis

The supplied project document does not provide a defect log or severity-based defect counts. Therefore, no defect quantities have been inferred or added to this report.

Resolution	Severity 1	Severity 2	Severity 3	Severity 4	Subtotal
By Design	—	—	—	—	—
Duplicate	—	—	—	—	—
External	—	—	—	—	—
Fixed	—	—	—	—	—
Not Reproduced	—	—	—	—	—
Skipped	—	—	—	—	—
Won't Fix	—	—	—	—	—
Totals	—	—	—	—	—

3. Test Case Analysis

The source project document describes the workflow activities and the final verification of the generated catalog task, but it does not provide explicit pass/fail/untested test-case counts. The following table records the documented verification areas without inventing execution counts.

Section	Total Cases	Not Tested	Fail	Pass
Flow Creation – Standard Laptop Task	1	—	—	—
Flow Trigger – Service Catalog	1	—	—	—
Create Catalog Task Action	1	—	—	—
Flow Assignment to Standard Laptop Catalog	1	—	—	—
Service Catalog – Place Order	1	—	—	—
Approval – Requested Item	1	—	—	—
Catalog Task – Short Description & Assignment Group	1	—	—	—

4. UAT Execution Details

Milestone 1 – Flow: A Flow named “Standard Laptop Task” is created in Flow Designer with Global application scope and System User execution. The Service Catalog trigger is configured, followed by a Create Catalog Task

action. The task uses the Requested Item record, sets the short description and description to "Laptop need to Configured", assigns the Hardware group, and requires Approval = Approved.

Milestone 2 – Flow Assignment: The Standard Laptop service catalog item is configured to use the newly created "Standard Laptop Task" flow, replacing the remaining automations.

Milestone 3 – Service Catalog: The Standard Laptop item is selected from Service Catalog → Hardware and an order is placed. The request number and Requested Item are opened, approval is performed, and the Catalog Tasks section is checked for the updated short description and assigned group.

5. Exception Reporting

The supplied project document does not identify any specific exception, failed execution, or unresolved issue. No additional exception has been inferred.

6. Final Report Output

The documented outcome is an automated workflow in which a standard laptop request can generate a catalog task for configuration and assign that task to the Hardware group after approval.

7. Version Control

Version 1.0 – UAT report generated from the supplied project documentation and formatted according to the provided UAT report template.

8. Conclusion

By automating the standard laptop procurement process with ServiceNow Flow Designer, the project addresses the documented inefficiencies and manual overhead. The workflow is intended to ensure timely configuration of laptops, minimise user wait times, improve task allocation, and enhance productivity within the IT department.
